

2010–2020 Performance Report

Performance Block 1: Equity Curve

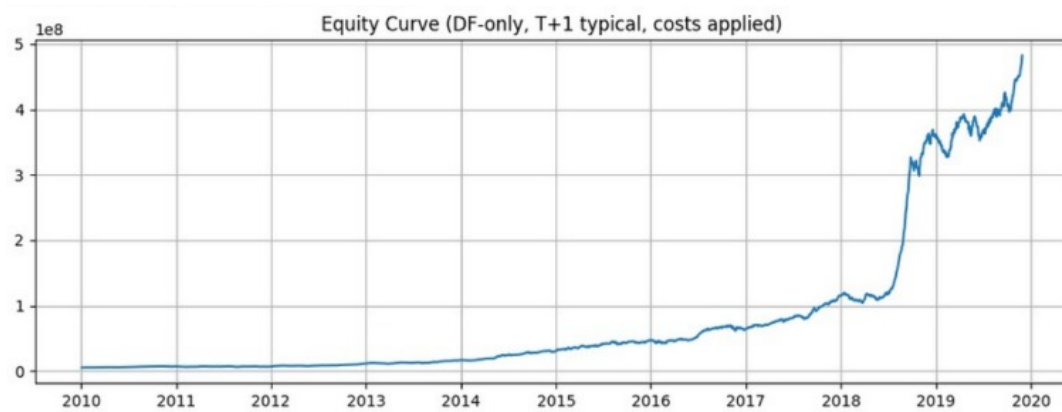

Figure 1: Equity curve from 2010 to 2020.

Analysis:

The strategy delivers very strong compounding (CAGR 58) with moderate volatility (16) and controlled max drawdown (19), resulting in an exceptional Information Ratio (3.16), indicating persistent alpha generation. However, the extremely high turnover (348x) and large average position count (44) suggest the performance is heavily dependent on aggressive rebalancing, which may face capacity and real-world slippage constraints.

Performance Block 2: Drawdown Profile

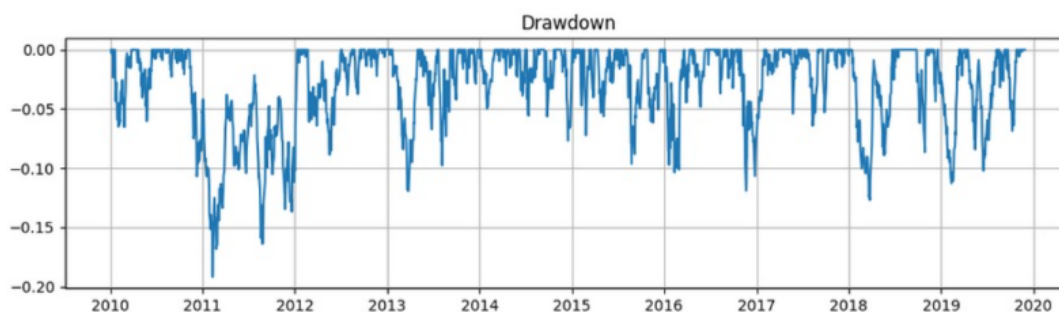

Figure 2: Portfolio drawdown behavior over the full backtest period.

Analysis:

The graph demonstrates a highly controlled maximum drawdown of roughly -19 over the 2010-2020 period, proving the effectiveness of the code's strict ATR stop-losses and small-cap breakeven ratchets in managing downside volatility. This resilient risk profile strongly aligns with the KRITI 2026 evaluation framework, where Max Drawdown and robust risk controls are heavily weighted core metrics for final out-of-sample scoring

Performance Block 3: Holdings Curve

Figure 3: Positions held over time.

Analysis:

The Holdings Count graph visibly adheres to the KRITI 2026 constraints by dynamically scaling with market conditions and capping the portfolio at exactly 100 stocks during high-conviction periods like 2014. Additionally, the graph validates the code's successful implementation of the minimum holding rule, automatically overriding signal-based sells to prevent the portfolio from dropping below 1 stock during severe market drawdowns.

Performance Summary

Metric	Value
Initial Capital	5,000,000
Final Equity	482,353,630.02
CAGR	58.65%
Annual Volatility	16.23%
Max Drawdown	-19.20%
Sharpe / Information Ratio	3.157
Up Capture Ratio	0.955
Down Capture Ratio	0.558
Turnover	347.982x
Avg Holdings	43.77
Max Holdings	100
Rolling Active (1Y)	Avg: 37.43%, Worst: -3.82%
Rolling Active (3Y)	Avg: 97.03%, Worst: 51.84%
Rolling Active (5Y)	Avg: 156.58%, Worst: 110.07%
Sharpe : 3.157
